

Plastics Technology Workshop: Recycled Plastics and Green Plastics Technologies

16 November 2017 (Thursday) | 2:00pm
Federation of Hong Kong Industries

Under the waste management policy in China, the import of several solid wastes is strictly prohibited. As plastics serve as one of the crucial materials in industrial production, it is time plastics makers to further think of waste treatment solutions through product design and manufacturing. 'Bottle-to-bottle' technology is the latest recycling technology which can enable manufacturers to save cost on turning plastics wastes into resins. This workshop will introduce different green plastics technologies to local industry players with a view to combating the influences brought about by the new policy set in China.

Workshop Highlights

- Solutions to confront China's latest policy on plastics waste
- Bottle-to-bottle technologies
- Advanced PET recycling systems
- Cost effective recycling technologies for plastics
- Latest green plastics technologies

Speakers

Peter Hartel
Head of Sales
Krones AG

Peter Wong
Chief Marketing Officer
