SynoLocker Ransomware Affecting Synology DiskStation

According to the Hong Kong Computer Emergency Response Team Coordination Centre, a recent ransomware called “SynoLocker” is currently affecting certain Synology NAS servers.

Based on Synology’s current observations, the issue only affects Synology NAS servers running some older versions of DiskStation Manager (DSM 4.3-3810 or earlier), by exploiting a security vulnerability that was fixed and patched in December, 2013. At present, Synology has not observed this vulnerability in DSM 5.0.

SynoLocker 勒索軟件影響 Synology DiskStation

根據香港電腦保安事故協調中心，最近一種名為「SynoLocker」勒索軟件正影響某些 Synology NAS 伺服器。

依照 Synology 目前觀察，該問題僅影響一些運行較舊的 DiskStation Manager (DSM 4.3-3810 或更早版本) 的 Synology NAS 伺服器。有關保安漏洞已在 2013 年 12 月修正及修補。現時，Synology 沒有在 DSM 5.0 發現這漏洞。
